**.Protection of hands:**

The glove material has to be impermeable and resistant to the product/the substance/the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/the preparation/the chemical mixture.

Selection of the glove material on consideration of the penetration times,rates of diffusion and the defradation

**.Material of gloves**

The selection of the suitable gloves does not only depend on the material,but also on further marks of quality and varies from manufacturer.As the product is a preparation of several substances,the resistance of the glowve material can not be calculated in advance and has therefore to be checked prior to the application.

**.Penetration time of glove material**

The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be abserved.

**.Eye protection:Goggles recommended during refilling**
