

Clorox Services Company

June 12, 2019

To: Whom it may concern

Dermal corrosion testing conducted by Clorox has found that certain products, including the Liquid Solutions Clorox Commercial Solutions Heavy Duty Liquid Plumr Gel Clog Remover are not corrosive to the skin according to DOT packing group, Class 8 corrosivity (SDS Section 14) but should be listed on the SDS as corrosive according to OSHA regulations (SDS Section 2).

In accordance with 49 CFR 173.154(d) Exceptions for Class 8 (corrosive materials), corrosive solutions (e.g. hypochlorite) are not subject to any other requirements of this subchapter when transported by motor vehicle or rail car when corrosive only to Aluminum or Steel. Accordingly the Clorox Commercial Solutions Clorox Germicidal Bleach is listed as “not restricted” in Safety Data Sheet for DOT transportation purposes (Section 14).

Please reply if you have any further questions regarding this information.
